Generated : 2026-05-30 19:56:42 UTC

Trace ID : 3db70bc6-3332-4109-beac-7e9eb9b8a007

1 - Incident Summary

Incident ID : 3db70bc6
Category : Security
Severity : SeverityLevel.CRITICAL
Source : OS
Cache : MISS

2 - Raw Log

```
2026-05-30 14:05:12 ERROR sshd: Failed password for invalid user admin from 192.168.1.77 port 54321 ssh2
```

3 - Classification

Category : Security
Severity : SeverityLevel.CRITICAL
Summary : SSH failed password attempt for invalid user from remote host.
Source : OS

4 - Diagnosis

Root Cause : The SSH daemon is exposed and configured to allow password authentication, making it vulnerable to brute-force login attempts for common usernames like 'admin'.

Confidence : 90%

Reasoning : The raw log shows a failed SSH password attempt for an invalid user, classified as a critical security event. The retrieved playbook directly addresses 'Weak SSH Configuration or Exposed SSH Daemon' and suggests disabling password authentication, which is the direct mitigation for the observed symptom.

Source Tier : llm
Used History : Yes
Used Playbook : No

5 - Proposed Solution

Explanation:

All automated remediation paths were unavailable. The steps above represent generic SRE triage protocol. Reason: 404 NOT_FOUND. {'error': {'code': 404, 'message': 'This model models/gemini-2.0-flash-lite is no longer available to

new users. Please update your code to use a newer model for the latest features and improvements.', 'status': 'NOT_FOUND'}}

Steps:

- 1. Identify and isolate the affected service or pod.
- 2. Collect recent logs and metrics for the incident window.
- 3. Check recent deployments or config changes that may have caused the issue.
- 4. Escalate to the on-call engineer with collected evidence.
- 5. Apply a rollback or hotfix once root cause is confirmed.

6 - Risk Assessment

Risk Level : RISKLEVEL.SAFE
