Trace ID : 7949aec3-9cb5-47de-839d-f8fd19ebe128

1 - Incident Summary

Incident ID : 7949aec3
Category : Security
Severity : SeverityLevel.FATAL
Source : OS
Cache : MISS

2 - Raw Log

```
17:12:24 FATAL sshd: Too many authentication failures for root from 10.0.0.55 port 49900 ssh2 --  
account locked
```

3 - Classification

Category : Security
Severity : SeverityLevel.FATAL
Summary : SSH authentication failure for 'root' account on remote host, resulting in account lockout.
Source : OS

4 - Diagnosis

Root Cause : The system's SSH configuration allowed password-based authentication for the root user, making it vulnerable to brute-force attempts and leading to an account lockout.

Confidence : 90%

Reasoning : The raw log shows a 'Too many authentication failures for root' event, directly indicating a brute-force attempt. The retrieved playbook, 'Weak SSH Configuration or Exposed SSH Daemon on Nodes', specifically addresses this by recommending disabling `PermitRootLogin` and `PasswordAuthentication`, which aligns perfectly with the observed incident.

Source Tier : llm
Used History : No
Used Playbook : Yes

5 - Proposed Solution

Explanation:

Gemini unavailable; remediation derived from playbook 'Weak SSH Configuration or Exposed SSH Daemon on

Nodes' (RAG confidence=0.5980). Review the playbook steps and adapt commands to the live environment before execution.

Steps:

- 1. Audit `/etc/ssh/sshd_config` on affected nodes for insecure settings.
- 2. Disable `PasswordAuthentication`, `PermitRootLogin`. Enforce key-based authentication only.
- 3. Restrict SSH access to specific jump hosts/IPs via firewall rules or `AllowUsers`/`AllowGroups` in `sshd_config`.
- 4. Restart `sshd` service (`sudo systemctl restart sshd`). For nodes that don't require SSH, ensure `sshd` is stopped and disabled.

6 - Risk Assessment

Risk Level : **RISKLEVEL.SAFE**

Safe Commands (0):

(none)

Flagged Commands (0):

(none)

7 - Operator Decision

Decision : OPERATORDECISION.APPROVED
