5 - Proposed Solution

Explanation:

Gemini unavailable; remediation derived from playbook 'Pod OOMKilled: Insufficient Memory Limit' (RAG confidence=0.7930). Review the playbook steps and adapt commands to the live environment before execution.

Steps:

- 1. Verify the `OOMKilled` status using `kubectl get pod <pod-name> -o yaml`.
- 2. Check container memory usage metrics (e.g., Prometheus/Grafana) to identify peak memory consumption.
- 3. Analyze application logs for clues about memory spikes or growth patterns.
- 4. Increase the `resources.limits.memory` for the affected container in its Deployment/StatefulSet manifest.
- 5. Roll out the updated deployment using `kubectl apply -f <manifest-file>` or `kubectl rollout restart deployment/<deployment-name>`.
