Trace ID : b70ef4d0-9b01-474d-a8e6-251089e953b6

1 - Incident Summary

Incident ID : b70ef4d0
Category : Memory
Severity : SeverityLevel.CRITICAL
Source : Kubernetes
Cache : MISS

2 - Raw Log

2026-05-30 18:22:11 ERROR kubelet: Pod worker-api-7d9f8b-xk2q in namespace production OOMKilled (container=worker-api) exceeded 256Mi limit

3 - Classification

Category : Memory
Severity : SeverityLevel.CRITICAL
Summary : Kubernetes pod killed for exceeding its memory limit.
Source : Kubernetes

4 - Diagnosis

Root Cause : The `worker-api` container's configured memory limit of 256Mi is insufficient for its operational memory requirements, leading to Kubernetes OOMKilling the pod, which is a recurrence of a known issue.

Confidence : 98%

Reasoning : The raw log indicates an OOMKill for `worker-api` exceeding 256Mi. The incident history explicitly states this exact incident occurred twice before with the root cause being an insufficient 256Mi memory limit for the `worker-api` container, and the playbook directly addresses OOMKills due to insufficient memory limits.

Source Tier : llm
Used History : Yes
Used Playbook : Yes

5 - Proposed Solution

Explanation:

The worker-api container in the production namespace was OOMKilled because its memory limit of 256Mi was

insufficient for its operational requirements.

Steps:

- 1. Check the memory and CPU utilization of the affected pod.
- 2. Increase the memory limit to 512Mi and request to 256Mi for the worker-api container to prevent OOMKilled events.
- 3. Monitor the rollout status of the updated worker-api deployment.

Commands:

```
$ kubectl top pod worker-api-7d9f8b-xk2q -n production
$ kubectl patch deployment worker-api -n production -p
'{"spec":{"template":{"spec":{"containers":[{"name":"worker-api","resources":{"limits":{"memory":"512Mi"},"requests":{"memory":"256Mi"}}}]}}}}'
$ kubectl rollout status deployment/worker-api -n production
```

6 - Risk Assessment

Risk Level : RISKLEVEL.SAFE

Safe Commands (3):

```
[OK] kubectl top pod worker-api-7d9f8b-xk2q -n production
[OK] kubectl patch deployment worker-api -n production -p
'{"spec":{"template":{"spec":{"containers":[{"name":"worker-api","resources":{"limits":{"memory":"512Mi"},"requests":{"memory":"256Mi"}}}]}}}}'
[OK] kubectl rollout status deployment/worker-api -n production
```

Flagged Commands (0):

(none)

7 - Operator Decision

Decision : OPERATORDECISION.APPROVED

Executed At : 2026-05-31T14:07:12.337331+00:00

Sandbox Results:

Command : kubectl top pod worker-api-7d9f8b-xk2q -n production

Exit : 0

Time : 0ms

Output:

NAME	CPU(cores)	MEMORY(bytes)
worker-api-7d9f8b-xk2q	245m	241Mi

Command : kubectl patch deployment worker-api -n production -p

'{"spec":{"template":{"spec":{"containers":[{"name":"worker-api","resources":{"limits":{"memory":"512Mi"},"requests":{"memory":"256Mi"}}}]}}}}'

Exit : 0

Time : 0ms

Output:

deployment.apps/worker-api patched

Command : kubectll rollout status deployment/worker-api -n production

Exit : 0

Time : 0ms

Output:

Waiting for deployment "worker-api" rollout to finish: 0 of 1 updated replicas are available...
