

LogPulse AI - Incident Report

Generated : 2026-06-01 18:40:03 UTC

Trace ID : c7de7116-2367-46df-88ff-44b48e85a250

1 - Incident Summary

Incident ID : c7de7116
Category : Memory
Severity : SeverityLevel.FATAL
Source : Kubernetes
Cache : MISS

2 - Raw Log

2026-01-15T22:14:07Z FATAL kubelet: Pod worker-api-7d9f8b-xk2q OOMKilled. Container exceeded memory limit of 256Mi. Exit code 137. Restart count: 14. Node: worker-1. Namespace: production.

3 - Classification

Category : Memory
Severity : SeverityLevel.FATAL
Summary : Kubernetes pod killed due to OOMKilled container exceeding its memory limit.
Source : Kubernetes

4 - Diagnosis

Root Cause : The container's configured memory limit of 256Mi is insufficient for its operational requirements, causing it to be repeatedly OOMKilled by Kubernetes.

Confidence : 95%

Reasoning : The raw log explicitly states the pod was OOMKilled after exceeding its 256Mi memory limit, with a high restart count. The retrieved playbook is titled 'Pod OOMKilled: Insufficient Memory Limit' and suggests increasing memory limits, directly matching the observed problem.

Source Tier : llm
Used History : No
Used Playbook : Yes

5 - Proposed Solution

Explanation:

The container's configured memory limit of 256Mi is insufficient for its operational requirements, causing it to be repeatedly OOMKilled by Kubernetes.

Steps:

- 1. Retrieves the YAML manifest of the OOMKilled pod to verify its status and details.
- 2. Shows current CPU and memory usage for the specified pod.
- 3. Retrieves logs for the OOMKilled pod to identify memory-related events.
- 4. Opens the deployment manifest for editing to increase memory limits for the 'worker-api' container.
- 5. Restarts all pods in the 'worker-api' deployment to apply updated resource limits.

Commands:

```
$ kubectl get pod worker-api-7d9f8b-xk2q -n production -o yaml
$ kubectl top pod worker-api-7d9f8b-xk2q -n production
$ kubectl logs worker-api-7d9f8b-xk2q -n production
$ kubectl edit deployment worker-api -n production
$ kubectl rollout restart deployment/worker-api -n production
```

6 - Risk Assessment

Risk Level : **RISKLEVEL.WARNING**

Safe Commands (4):

- [OK] kubectl get pod worker-api-7d9f8b-xk2q -n production -o yaml
- [OK] kubectl top pod worker-api-7d9f8b-xk2q -n production
- [OK] kubectl logs worker-api-7d9f8b-xk2q -n production
- [OK] kubectl edit deployment worker-api -n production

Flagged Commands (1):

- [!] kubectl rollout restart deployment/worker-api -n production [kubectl\s+rollout\s+restart]

7 - Operator Decision

Decision : OPERATORDECISION.APPROVED

Executed At : 2026-06-01T15:39:57.824119+00:00

Sandbox Results:

Command : kubectl get pod worker-api-7d9f8b-xk2q -n production -o yaml

Exit : 0

Time : 0ms

Output:

Name:	worker-api-7d9f8b-xk2q
Namespace:	production
Node:	worker-1
Status:	OOMKilled
Containers:	
app:	
Image:	app:latest
Limits:	
memory:	256Mi
cpu:	500m
Usage:	

```
memory: 241Mi
cpu:      245m
Last State:
Reason:   OOMKilled
... [truncated]
```

Command : kubectl top pod worker-api-7d9f8b-xk2q -n production

Exit : 0

Time : 0ms

Output:

NAME	CPU(cores)	MEMORY(bytes)
worker-api-7d9f8b-xk2q	245m	241Mi

Command : kubectl logs worker-api-7d9f8b-xk2q -n production

Exit : 0

Time : 0ms

Output:

```
2025-01-15T22:10:00Z WARN  Memory usage rising: 78% of 256Mi
2025-01-15T22:12:30Z WARN  Memory critical: 91% of 256Mi
2025-01-15T22:13:55Z ERROR Memory critical: 94% of 256Mi -- GC thrashing
2025-01-15T22:14:07Z FATAL OOMKilled: container exceeded 256Mi limit
```

Command : kubectl edit deployment worker-api -n production

Exit : 0

Time : 0ms

Output:

```
[simulation] no-op -- unknown : no handler for 'unknown '
```

Command : kubectl rollout restart deployment/worker-api -n production

Exit : 0

Time : 0ms

Output:

```
deployment.apps/worker-api restarted
```
